

Software Specifications

Wokwi

Wokwi is an online electronics simulator used to simulate Raspberry Pi Pico W and electronic circuits. It allows testing without purchasing hardware.

Features

- Raspberry Pi Pico W Simulation
 - HC-SR04 Sensor Simulation
 - Real-time Code Execution
 - Wi-Fi Support
 - Serial Monitor
 - Circuit Visualization
-

Thonny IDE

Used to develop and test MicroPython code before simulation.

MicroPython

Programming language used for Raspberry Pi Pico W.

ThingSpeak

IoT cloud platform used to visualize garbage level using graphs and charts.

GitHub

Version control platform used to upload project documentation, source code, and simulation files.
