

Scope of the Solution

Objectives

- Design an IoT-based waste monitoring system.
- Simulate the complete system using Wokwi.
- Measure garbage level using an ultrasonic sensor.
- Upload sensor data to an IoT dashboard.
- Display real-time waste level.
- Generate alerts when the dustbin is nearly full.

Scope

The project focuses on the simulation of an intelligent waste monitoring system without requiring physical hardware. The system demonstrates how IoT technology can automate waste level monitoring in smart cities, educational institutions, hospitals, shopping malls, railway stations, and residential areas.

The simulation validates the working of the system before real-world deployment.
